About me

I'm someone who gets genuinely excited when code actually works

*A few months ago, I decided to really understand how modern frontend development works — not just tutorials, but building something real. That something became full-case — a project that started simple but turned into my playground for everything **React**, **TS**, **Redux**, **testing**, and all the tools that make professional development what it is*

My goal:

To contribute to real-world projects as a frontend developer, continuously improve my skills, and write clean, efficient, and testable code

My strengths:

- Understanding of modern **React** ecosystem and **TypeScript**
- Experience with professional development tools and workflows (**Webpack**, **Vite**, **ESLint**, **Storybook**)
- Commitment to code quality through testing (**Unit**, **Component**, **E2E**) challenges
- Ability to work with complex architectures (**Feature Sliced Design**)

What I learned along the way:

- That architecture matters (Feature Sliced Design changed how I think about code)
- That tests are actually friends, not enemies (took me a while to accept this)
- That breaking things is the fastest way to learn

My experience:

*I have developed a full-scale production-ready application **full-case** — a complex **React** + **TS** project that demonstrates my ability to work with modern frontend technologies*

My aspirations:

I'm looking for a team where I can contribute, ask stupid questions, and gradually become a developer others can count on

Skills:

- HTML
- CSS, CSS Preprocessor SCSS (Sass), CSS Modules
- React + TypeScript
- Webpack + Vite
- Redux Toolkit + RTK Query
- Jest + React Testing Library
- Cypress (e2e tests)
- Storybook + Chromatic
- ESLint + Stylelint + Custom ESLint Plugin
- Feature Sliced Design (FSD)
- i18next (i18n)
- GitHub Actions (CI/CD)
- Pre-commit hooks
- EntityAdapter (from Redux Toolkit), DynamicModuleLoader

Education

Education in development came through **practice**, reading official documentation of the necessary technologies, and watching training videos

English

I started learning English not long ago, reaching level B1. I studied mainly using [Lingualeo](#) and [Duolingo](#)
